System Integration

Implementing an e - governance project requires varied skill sets that are seldom if ever available with one company or service provider.

Given the fact that each of these disciplines is a specialization that requires separate competencies, implementation of e-governance projects is always handled by a Systems Integrator who brings these various disciplines together and ensures timely, accurate and sustainable solutions.

The typical components of an e-governance project include:

- IT Solution architecting and designing.
- IT Infrastructure Implementation.
- Software Solution
- Digitization and Database Management.
- Legacy System and Data Migration.
- Training & Education on new systems.
- Operation and maintenance.
- Site Preparation & Maintenance.

We combine complex technologies together with our proven processes to maximize compatibility, interoperability and enterprise wide information integration. The breadth and depth of our system integration capabilities enable us to leverage your IT investments, minimize your risk and deliver complete system integration services and solutions addressed to your unique business needs. System integration portfolio offers:

- Manage application infrastructures
- Software and hardware integration
- Network integration
- Enterprise application integration
- Legacy to web migration

Sunpro continues to be a focused player in the e-governance systems integration domain.

Having tie-ups with world's leading hardware and software companies, Sunpro extends management bandwidth, manpower, infrastructure and experience to meticulously manage massive mission critical projects within tight deadlines.

IT Infrastructure

Services offer companies seeking to get the maximum out of their IT infrastructure a structured, reliable, dependable, scalable and efficient Infrastructure Management service.

Our infrastructure services address core issues of importance to companies including life cycle services in:

- Desktop, Server, Storage Management
- Enterprise Messaging Management
- Network and security Management
- Data Center Management
- Facility Management Services
- Application Management
- Help Desk Support

Our strategic services help companies to ensure that their IT infrastructure is always “next generation ready” to ensure that they stay ahead of the rapidly transforming IT landscape.

Our IT Infrastructure services enable companies to get more out of their existing infrastructure, increase IT infrastructure reliability and up time, ward security threats, and ensure continual availability of IT capabilities.

Enterprise Solutions - Delivering systemic response to enterprise challenges.

Enterprise Solutions deliver single source solution that comprehensively addresses the company and its competitive environment, so as to bring about transformations that place it a league ahead of the rest of the industry.

We enable companies to sustain their profitability in rapidly changing and fiercely competitive environment by:

- Improving Security.
- Enhancing scalability.
- Reducing costs.
- Portability across changing technologies.
- Solutions for corporate competitive edge.

Oracle Support Services

You can reduce support costs, manage your mission critical application proactively, avoid any disaster and focus on your core business.

Membership

- Silver 25,000.00
- Gold 50,000.00
- Platinum 1,00,000.00

Services

- Oracle High Availability Consulting to adopt best practices in Oracle High Availability Solutions
- Oracle Performance Enhancements to fine tune your database and back-end applications for peak load
- Oracle Database Migration to upgrade your database to the latest version
- Oracle Security Enhancements to analyze your existing database security

High Availability Consulting

When disaster strikes, your ability to respond to the crisis depends on the planning and investment you have made in implementing a high availability solution.

We specialize in planning and implementation of Oracle High Availability solutions such as:

- Oracle Real Applications Clusters (RAC)
- Extending Oracle Real Applications Clusters to Enterprise Grids
- Oracle Data Guard - Disaster Recovery and Data protection solutions

Performance Enhancements

After implementing Oracle database and applications and allowed it to stabilize and mature over a period of time, you now need is an expert consultant to help you carry out performance enhancements.

We help you to address these situations by carrying out a detailed analysis of your database and back-end applications. Our Performance Enhancement services focus on:

- Detailed fact finding exercise of capacity planning and database deployment standards
- Analysis of key resource leakages
- Database / Instance tuning
- Identification of "bad" SQL queries with recommended rectifications

Database Migration

Whether you are upgrading your current Oracle database to a new version or migrating non-Oracle databases to Oracle,

We have carried out hundreds of database migration projects over the last decade. Take advantage of our structured migration process for a successful and time bound database migration.

We specialize in:

- Oracle Database Version Upgrade
- Cross Platform Oracle Database Migration
- Non-Oracle to Oracle Database Migration (DB2, SQL Server, Informix, My SQL)

Security Enhancements

In today's networked world, there is an increased dependence on web-enabled information systems, making database security enhancements highly critical. Even after having implemented security comprising of security appliances, software, secure networks, you need Security Enhancements to be incorporated into your Oracle Database.

- Design / audit security guidelines and train administrators to follow guidelines
- Latest database security patches are tested and applied
- Periodic database security audits
